Have you tried to install certain programs on Windows 8 and you get an error saying it needs .NET Framework 2.0? Here’s how to enable previous version of .NET so you can install and use those programs. While using Windows 8 or Windows 10, I’ve found that many older programs won’t install or run correctly because they require previous versions of the .NET Framework. Here’s how to enable support for those versions of the .NET Framework.Some programs will want to download an older version of the .NET Framework, but this doesn’t work. You still need to enable it.From the Windows 8 desktop, open the power user menu and select Control Panel. On Windows 10, hit the Windows key, type: control panel, and choose the top result.From the Control Panel, click Programs and Features. When the Programs and Features window comes up, click Turn Windows Features On or Off.Then check .NET Framework 3.5 (includes .NET 2.0 and 3.0) and click OK.Next, you’ll need to download files from Windows Update.Wait while the previous versions of the .NET Framework are downloaded and installed.A restart might be required. I enabled previous versions of .NET on three different Windows 8 systems, and my 32-bit version needed to be restarted.Now you can start using the programs that require the old versions of the .NET Framework. Definitions Insights Reference Topics About Us When trying to install an application, it is asking for .NET Framework 2.0.50727. Where do I get the right installer? 2 .NET is a library with computer code that is required by other applications. Some programs are made using NET programming language and this update ensures that these applications can be installed and used on your computer, otherwise you will see an error or a message to install it.The .NET Framework 2.0 is a remarkable union of countless technologies, which maintains compatibility with Win32 and COM. It was released in 2005 to stimulate the wave of Windows Vista and WinFX technologies, including the Windows presentation, communication and work flow groundwork. It is featured into numerous components like virtual machine that is in charge of executing of managed code. .NET Framework 2.0 is licensed as freeware for PC or laptop with Windows 32 bit and 64 bit operating system. It is in os components category and is available to all software users as a free download. Microsoft .NET Framework is a development platform that provides programmers with the possibility to create applications for Windows computers and servers, for Microsoft Azure, and for mobile devices that run under Windows. From this product page, end users can download the 1.1 and 2.0 versions required to install and run programs based on these editions. With the help of this programming model, software developers can create, deploy, test and run programs on different platforms and systems. Version 1.1 and 2.0 are the oldest releases and, although they may seem obsolete, there are still plenty of applications which require them to be installed and run on Windows. These editions can be setup without conflict alongside .NET Framework 3.5 or .NET Framework 4.0/4.5 and above. By default, the runtime is offered in English, but users can download language packs for French, Korean, Spanish, Italian, German, or Japanese (x86, x64, and IA64), if they want to receive text messages (such as errors) in another language. It's possible to download and install multiple language packs on the same computer. However, users can not install a different language version of .NET Framework on the same system. Developers interested in building applications for .NET Framework 2.0 can download and install the Microsoft .NET Framework version 2.0 Software Development Kit (SDK), which provides all the tools, documentation and samples required to build and deploy such programs.
